RP-QM90 Series Rope Pull Switches

Datasheet

- Positive-opening safety contacts (IEC 60947-5-1), not dependent upon springs
- Contacts latch open when rope is pulled; requires manual reset
- Heavy-duty die cast metal housing, rated IP65, suitable for demanding industrial environments
- Rope spans up to 100 m (330 ft), with the switch mounted in the center of the span
- Both safety contacts are closed with normal rope tension, and open when rope is pulled or if rope breaks (or if tension is reduced from normal amount)
- Extra contacts for monitoring or to provide dual-channel input to a safety module
- Switch actuator position clearly indicates when rope has proper tension for operation
- Long life, switch rated at 1 million mechanical operations, minimum
- Protective Earth Terminal (IEC 60947-1)

Model	Max. Overall Rope Length	Run Position	Cable Pulled (either side)	Cable Break (either side)	Switching Diagram
RP-QM90F-100L	100 m (330 ft)	23 <u>O</u> 24 11 O 12 11 <u>O</u> 12 23 <u>O</u> 24	23 <u>O</u> 24 11 O 12 11 <u>O</u> 12 23 O 24	23 <u>O</u> 24 11 <u>O</u> 12 11 <u>O</u> 12 23 <u>O</u> 24	100 Lock 30° 30° 40° 30° 40° 40° 40° 40° 40° 40° 40° 40° 40°

Note: This symbol for a positive-opening safety contact (IEC 60947-5-1) is used in the switching diagram to identify the point in actuator travel where the normally-closed safety contact is fully open.

Important... Read This First

Regarding the Use of Rope Pull Switches. In the United States, the functions that Banner rope pull switches are intended to perform are regulated by the Occupational Safety and Health Administration (OSHA). Whether or not any particular rope pull switch installation meets all applicable OSHA requirements depends upon factors that are beyond the control of Banner Engineering Corp. These factors include the details of how the switches are applied, installed, wired, operated, and maintained.

Banner Engineering Corp. has attempted to provide complete application, installation, operation, and maintenance instructions in this document. Direct any questions regarding the use or installation of rope pull switches to the factory applications department.

Banner Engineering Corp. recommends that rope pull switches be applied according to the guidelines set forth in the standards listed below. In addition, the user is responsible for ensuring all local, state, and national laws, rules, codes, and regulations relating to the use of Banner rope pull switches in each application are satisfied. Extreme care is urged that all legal requirements are met and that all installation and maintenance instructions are followed.

Overview

The model RP-QM90F-100L is a two-sided rope pull switch in a heavy-duty metal housing. When used with steel wire rope, it can provide stop actuation along conveyors and similar machinery. This model is designed to be mounted in the center of a long, straight run of cable (up to 100 meters/330 ft total); this model switch does not accommodate corners along the cable's length. Red PVC-covered 4 mm diameter wire rope is recommended.

The switch features redundant terminal pairs. Both pairs of terminals 11–12 will act concurrently and identically to latch open when the rope is pulled, regardless of which side of the switch the rope is pulled. Both pairs of terminals 23–24 are normally open monitoring contacts; they will act concurrently and identically to close when the rope is pulled. If the rope should break or become slack for any reason, the switch actuator will pull to the taut side, so contact behavior for a rope break condition is the same as that for a rope pull. The contact pairs (the two 11–12 and the two 23–24) should be wired together, in series.

These rope pull switches are not safeguarding devices, in that they do not protect personnel from injury. They provide the same function as other types of stop switches.

This rope pull switch features "latching" operation. When the rope is pulled, the switch contacts 11–12 open and remain open until the built-in reset actuator (the ring) is manually pulled to reset.

WARNING: Not a Safeguarding Device

An Emergency Stop Device is not considered a safeguarding device because it requires an overt **action** by an individual to stop machine **motion** or hazards.

A safeguarding device limits or eliminates an individual's exposure to a hazard *without action by the individual or others*. Because an individual must actuate the device for it to function, these devices do not fit the definition of a safeguarding device and cannot be substituted for required safeguarding. Refer to the relevant standards to determine those requirements.

Mechanical Installation

Installation Guidelines

- The rope should be easily accessible and visible along its entire length. Markers or flags may be fixed on the rope to increase its visibility
- · Mounting points, including support points, must be rigid and allow sufficient space around the rope to allow easy access
- The rope should be free of friction at all supports. Pulleys are recommended
- The rope may not be routed around a corner, for this model.
- Never run rope through conduit or other tubing
- Never attach weights to the rope
- Temperature affects rope tension. The wire rope expands (lengthens) when temperature increases, and contracts (shrinks) when temperature decreases. Significant temperature variations require frequent checks of the tension adjustment
- Do not exceed the maximum specified total rope length. Banner offers models for other spans; contact Banner Engineering or visit www.bannerengineering.com for model selection

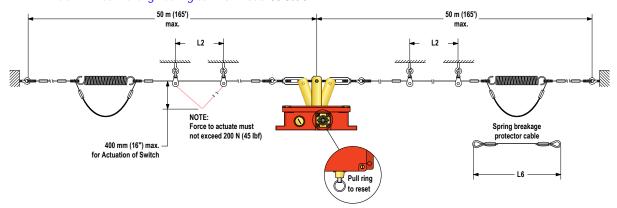

Figure 4. Assembly of Rope and Hardware

Springs Used	Max. Span Between Pulleys (L2)	Spring Breakage Protector Cable Length (L6)
Tensioning Spring #1	1 m to 2 m (3 ft to 6.5 ft)	380 mm to 410 mm (15.0 inches to 16.1 inches)
Tensioning Spring #2	2 m to 2.5 m (6.5 ft to 8 ft)	310 mm to 320 mm (12.2 inches to 12.6 inches)

All hardware is supplied by the user. The switch mounting holes are on a standard limit switch mounting pattern of 30 x 60 millimeters, and accept M5 (#10) hardware. Wire rope and associated hardware may be ordered separately; see *Accessories*.

Installation Procedure

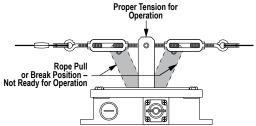

Figure 5. Correct Rope Tension Indicator

- 1. Mount the switch securely on a solid, stationary surface, approximately in the center of the rope span.
- 2. Fasten an eye bolt at the far ends of the rope span, up to 50 m (165 ft) from the switch. The anchor for the eye bolts also must be solid and stationary, to withstand the constant tension of the rope.
- Assemble the rope, as shown. Keep the rope's PVC cover intact along its complete length.
- 4. Use pulleys (recommended) or eye bolts at each support point. If tensioning spring #1 is used, the span between pulleys may not exceed 2 m (6.5 ft). If tensioning spring #2 is used, the span between pulleys may not exceed 2.5 m (8 ft).
- Apply tension to the rope using the turnbuckles on both sides of the switch actuator. Apply tension until both springs are stretched equally and the switch actuator is perpendicular to the switch housing. (Contacts 11– 12 will close and contacts 23–24 will remain open.)
- 6. Pull hard on the rope and reset the latch several times. If contacts 11–12 remain open following the reset, further tighten the turnbuckle, until the contacts close.
- 7. Repeat step 6 until contacts 11–12 remain closed for the Run condition

Electrical Installation

Access to the Wiring Chamber. The wiring chamber is accessed via a cover plate (remove four screws). A conduit adapter is supplied to convert the 20 millimeter threaded entrance to 1/2" NPT. An accessory cable gland which fits the metric thread is also available.

Wiring. Because the model RP-QM90F-100L has redundant pairs of safety contacts, this switch may be wired for either single-channel or dual-channel output to a safety device. Monitor contacts, in either case, may be wired as desired to an external alarm device. Wire the two switch contacts in series.

Single-Channel Output. Jumper the two pairs of safety contacts 11-12 and wire together to the input of a safety device

Dual-Channel Output. No jumpering is required between the two pairs of safety contacts 11–12. Wire them independently to two safety device inputs.

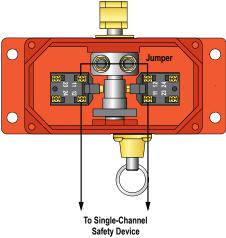

Figure 6. Single-Channel Safety Device

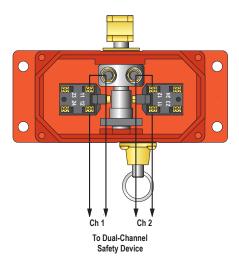

Figure 7. Dual-Channel Safety Device

Maintenance/Checkout

At switch installation or replacement and at machine set up, a Designated Person must test each switch for proper machine shutdown response and check the switch(es) and installation for proper operation, physical damage, mounting (looseness), and excessive environmental contamination. This must also take place on a periodic schedule determined by the user, based on the severity of the operating environment and the frequency of switch actuations. Adjust, repair, or replace components as needed. If inspection reveals contamination on the switch, thoroughly clean the switch and eliminate the cause of the contamination. Replace the switch and/or appropriate components when any parts or assemblies are damaged, broken, deformed, or badly worn; or if the electrical/mechanical specifications (for the environment and operating conditions) have been exceeded. Always test the control system for proper functioning under machine control conditions after performing maintenance, replacing the switch, or replacing any component of the switch.

Additional items that should be included in the checkout and/or regularly scheduled maintenance of a rope pull system:

- Check for proper rope tension and adjust as needed
- Verify free operation (no binding) of the rope and proper tripping when the rope is pulled
- Periodically lubricate the pulleys and other moving parts associated with the rope
- Repair any loose or damaged hardware, worn/frayed rope (cable), missing red rope sheathing or flags/markers (if used)
- Remove or clean off any contamination and eliminate its cause

Repairs

Contact Banner Engineering for troubleshooting of this device. Do not **attempt** any repairs to this Banner device; it contains no **field-replaceable** parts or components. If the device, device part, or device component is determined to be defective by a Banner Applications Engineer, they will advise you of Banner's RMA (Return Merchandise Authorization) procedure.

Important: If instructed to return the device, pack it with care. Damage that occurs in return shipping is not covered by warranty.

¹ A Designated Person is identified in writing by the employer as being appropriately trained to perform a specified checkout procedure

Contact Material

Silver-nickel allow

Maximum Switching Speed

50 operations per minute

Recommended Rope Size

4 mm diameter steel rope

Maximum Rope Pull Length

100 m (330 ft); equal lengths up to 50 m (165 ft) on either side of switch

Short Circuit Protection

 $10\ amp\ Slow\ Blow,\ 15\ amp\ Fast\ Blow.$ Recommended external fusing or overload protection.

Mechanical Life

1 million operations

Wire Connections

Screw terminals with pressure plates accept the following wire sizes – Stranded and solid: 20 AWG (0.5 mm 2) to 16 AWG (1.5 mm 2) for one wire Stranded: 20 AWG (0.5 mm 2) to 18 AWG (1.0 mm 2) for two wires

M20 x 1.5 threaded entrance. Adapter supplied to convert M20 x 1.5 to ½"-14 NPST threaded entrance

Construction

Aluminum alloy die-cast

Environmental Rating

IEC IP65

Operating Conditions

Temperature: -30 °C to +80 °C (-22 °F to +176 °F)

Weight

3.8 Kg (8.4 lbs)

Required Overcurrent Protection

WARNING: Electrical connections must be made by qualified personnel in accordance with local and national electrical codes and regulations.

Overcurrent protection is required to be provided by end product application per the supplied table.

Overcurrent protection may be provided with external fusing or via Current Limiting, Class 2 Power Supply.

Supply wiring leads < 24 AWG shall not be spliced.

For additional product support, go to www.bannerengineering.com.

Banner Engineering Corp. Limited Warranty

Banner Engineering Corp. warrants its products to be free from defects in material and workmanship for one year following the date of shipment. Banner Engineering Corp. will repair or replace, free of charge, any product of its manufacture which, at the time it is returned to the factory, is found to have been defective during the warranty period. This warranty does not cover damage or liability for misuse, abuse, or the improper application or installation of the Banner product.

THIS LIMITED WARRANTY IS EXCLUSIVE AND IN LIEU OF ALL OTHER WARRANTIES WHETHER EXPRESS OR IMPLIED (INCLUDING, WITHOUT LIMITATION, ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE), AND WHETHER ARISING UNDER COURSE OF PERFORMANCE, COURSE OF DEALING OR TRADE USAGE.

This Warranty is exclusive and limited to repair or, at the discretion of Banner Engineering Corp., replacement. IN NO EVENT SHALL BANNER ENGINEERING CORP. BE LIABLE TO BUYER OR ANY OTHER PERSON OR ENTITY FOR ANY EXTRA COSTS, EXPENSES, LOSSES, LOSS OF PROFITS, OR ANY INCIDENTAL, CONSEQUENTIAL OR SPECIAL DAMAGES RESULTING FROM ANY PRODUCT DEFECT OR FROM THE USE OR INABILITY TO USE THE PRODUCT, WHETHER ARISING IN CONTRACT OR WARRANTY, STATUTE, TORT, STRICT LIABILITY, NEGLIGENCE, OR OTHERWISE.

Banner Engineering Corp. reserves the right to change, modify or improve the design of the product without assuming any obligations or liabilities relating to any product previously manufactured by Banner Engineering Corp. Any misuse, abuse, or improper application or installation of this product or use of the product for personal protection applications when the product is identified as not intended for such purposes will void the product warranty. Any modifications to this product without prior express approval by Banner Engineering Corp will void the product warranties. All specifications published in this document are subject to change; Banner reserves the right to modify product specifications or update documentation at any time. Specifications and product information in English supersede that which is provided in any other language. For the most recent version of any documentation, refer to: www.bannerengineering.com.
