

Series AP Diaphragm Operated Pressure Switches are reliable, convenient, compact, low-cost switches for instrument air or other low-pressure applications. Visible set point and external adjustment add convenience. Used on air, noncorrosive gas or liquid service compatible with wetted parts. These switches are available with optional weather-proof and explosion-proof housings.

OPERATING RANGES - TYPE AP \& AP-41
With Mercury Switch (mm/w.c.), [bar]

| Deadband Range Number | Circuit <br> Suffix <br> Number | Switch <br> Action On <br> Press. <br> Increase | Approx. Switch Deadband |  |

Type AP and AP-41 with Suffix No's.
$-153,-2,-3,-26,36,-88,-89$

## OPERATION

A variation in control pressure causes the diaphragm to actuate the hermetically sealed mercury switch to open or close the electrical contact.

## APPLICATION

Type AP with suffix numbers $-153,-2,-3,-26,-36,-88,-89$ are for use with mediums not injurious to steel, silver solder or Fairprene diaphragm.

Type AP-41 with suffix numbers $-153,-2,-3,-26,-36,-88,-89$ are for use with mediums not injurious to 316 SS and PTFE.

## MOUNTING

Install control firmly in a LEVEL POSITION on a panel or smooth wall surface by means of two mounting ears. Where pipe mounting is desired, control may be connected by means of the $1 / 4^{\prime \prime}$ I.P.S. connection. Do not mount control by twisting the case; use a wrench on the square part of the $4^{\prime \prime}$ bottom pipe connection. To level, sight across the two cover screws or check the lower end of the glass opening in the cover to see that instrument is lined up horizontally.

## WIRING

Wire in accordance with local electrical codes or equipment manufacturers' instructions. See nameplate attached to inside of control case for terminal markings and electrical rating. Do not overload. Do not oil any parts. Do not tamper with switch wires. Position of these wires is essential for proper operation. Tampering with these wires will void warranty.

Type AP and AP-41with Suffix No's.
153, -2, -3, -26, 36, -88, -89

## OPERATION

A variation in control pressure causes the diaphragm to actuate the snap action switch.

## APPLICATIONS

Type AP, APH, APW, APWT with suffix numbers 7021-153 or 8021-153 are for use with mediums not injurious to steel, silver solder, Nylon/Buna-N diaphragm.

Type AP, APH, APW, APWT with suffix numbers 7041-153 or 8041-153 are for use with mediums not injurious to 316 SS and PTFE covered diaphragm.

## MOUNTING

Mount in any position.
Type AP (general purpose) can be installed on a panel or smooth surface using the two mounting ears or the 4" NPT bottom connection. Do not mount by twisting the case; use a wrench on the square part of the 4 " bottom pipe connection.

Type APW-NEMA 3 (weather-resistant): 4" male NPT bottom connection.
Type APWT-NEMA 4 (water-tight): 4" male NPT bottom connection.

Type APH (explosion-proof ): 4" male NPT bottom connection. Or use mounting bracket No. PP-135-95

## WIRING

Wire in accordance with the national Electrical code and local regulations. Observe wiring diagram inside enclosure and details below for type No. and electrical rating. Where control is connected directly into the load circuit, it must be wired into hot side of line. Do not overload. Do not oil any parts.

All Types Single-Pole, Double-Throw (-153) or Double-Pole, Double Throw (-804) Operation

| Common |  | On Hi |  | On Hi |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\underset{\text { On }}{\text { Oi }}$ | On Lo | Common | On Lo | Common | On Lo |
| -153 | -DT | -804-DP-DT |  |  |  |

## ADJUSTMENTS

Turn adjustment screw "A" (see above) until pointer on dial indicates desired operations pressure.
